

Performance-based fire protection

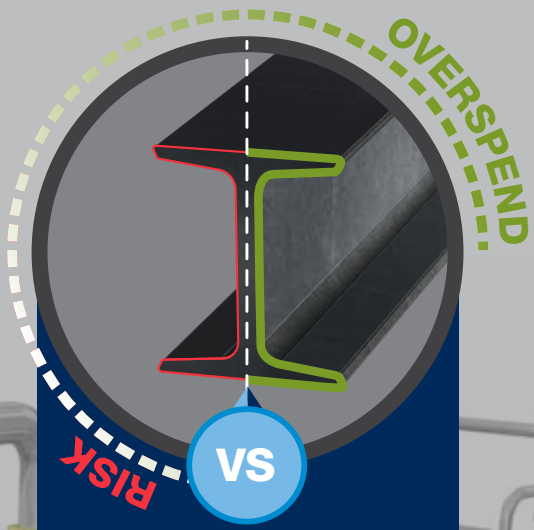

Steel driven solutions with **Chartek®**

The industry's most trusted fire protection experts

based on **45+** years of proven field experience

Lab data + Real world science

Are you prepared to risk life safety on fire protection guess work or should the application of science, engineering, and forensic experience prevail?

Using a legacy approach of prescriptive single thickness specification results in costly over-protection or dangerous under fire protection on your steel

One size does not fit all
Structural steel comes in all shapes, sizes and loadings that require custom PFP material coverage which optimizes performance and protection

Managing OPEX by optimizing CAPEX

Combining performance-based on fire protection with fit for purpose material delivers long term cost effective protection while preventing runaway maintenance and repair costs.
