

# Ceilcote® 505 Coroline

## Epoxy

### PRODUCT DESCRIPTION

A heavy duty epoxy system with proven chemical resistance for use over metal or concrete surfaces.

### INTENDED USES

Ceilcote 505 Coroline contains graded fillers and is reinforced with a single layer of chopped strand mat reinforcement. It is designed for use where a high level of chemical and corrosion resistance is required.

Ceilcote 505 Coroline has found extensive use in a number of industry sectors in applications such as storage tanks, trenches, tank pads, floor topping, secondary containment and process equipment.

It is widely used in areas of dilute acid and in highly caustic environments.

### PRACTICAL INFORMATION FOR CEILCOTE 505 COROLINE

<b>Color</b>	Grey
<b>Gloss Level</b>	Not applicable
<b>Volume Solids</b>	97%
<b>Typical Thickness</b>	<b>Basecoat:</b> 60 mils (1500microns) dry equivalent to 62 mils (1546microns) wet, with a theoretical coverage of 55 sq.ft/US gallon (1.41sq.m/litre) <b>Laminate (Resin saturated reinforced mat):</b> 32 mils (800microns) with a theoretical coverage of 50 sq.ft/US gallon(1.42 sq.m/litre) <b>Topcoat:</b> 60 mils (1500microns) dry equivalent to 62mils (1546microns) wet, with a theoretical coverage of 55 sq.ft/US gallon (1.41 sq.m/litre)

**Practical Coverage** Allow appropriate loss factors. Coverage will vary according to individual systems and the configuration of the surface to be coated; consult the relevant Application Guidelines and specification for further information.

**Method of Application** Trowel, Roller

### Drying Time

Temperature	Touch Dry	Hard Dry	Overcoating Interval with recommended topcoats	
			Minimum	Maximum
50°F (10°C)	15 hours	24 hours	9 hours	28 days
59°F (15°C)	11 hours	19 hours	8 hours	28 days
77°F (25°C)	3 hours	7 hours	4 hours	28 days
104°F (40°C)	2 hours	3 hours	2 hours	7 days

**REGULATORY DATA** **Flash Point (Typical)** Part A 106°F (41°C); Part B 262°F (128°C); Mixed 106°F (41°C)

**Product Weight** 9.2 lb/gal (1.1 kg/l)

**VOC** 0.54 lb/gal (65 g/l) EPA Method 24

35 g/kg EU Solvent Emissions Directive (Council Directive 1999/13/EC)

See Product Characteristics section for further details

## Protective Coatings

## Epoxy

### SURFACE PREPARATION

All surfaces to be coated should be clean, dry and free from contamination. Prior to application, all surfaces should be assessed and treated in accordance with ISO 8504:2000.

Oil or grease should be removed in accordance with SSPC-SP1 solvent cleaning.

#### Steel Substrates

This product should be applied to suitably primed surfaces which have been prepared by abrasive blast cleaning to Sa3 (ISO 8501-1:2007), SSPC SP5 or NACE #1. For dry environments or fume service, abrasive blast cleaning to Sa2½ (ISO 8501-1:2007), SSPC SP10 or NACE #2 will be suitable. A surface profile of 100 microns (4 mils) is required.

#### Concrete Substrates

Concrete should be well cured prior to priming with the appropriate primer. The concrete surface should be dry and pass the plastic sheet test (ASTM D4263). All surfaces should be clean, dry and free from curing compounds, release agents, trowelling compounds, surface hardeners, efflorescence, grease, oil, dirt, old coatings and loose or disintegrating concrete. All concrete surfaces must also be abrasive blast cleaned to provide a roughened surface and remove laitance. The surface tensile strength (ASTM 4541) as prepared should be at least 2MPa (300 psi). Refer to the Concrete Surface Preparation Guidelines for more information.

### APPLICATION

<b>Mixing</b>	Ceilcote 505 Coroline must always be mixed and applied in accordance with the detailed Application Guidelines for the subsequent system. The resin component of this material is supplied in two containers as a unit. Always mix a complete unit in the proportions supplied. Once the material has been mixed it must be used within the working pot life specified.			
	(1) Agitate Part A, then combine the entire contents of Part A and Part B and mix thoroughly with a power agitator. (2) Part C, the powder component, should be slowly added to the thoroughly mixed Part A and Part B whilst stirring with a power agitator. See Product Characteristics Section for details of quantities required.			
<b>Mix Ratio</b>	8 part(s) : 1 part(s) by volume			
<b>Working Pot Life</b>	50°F (10°C) 90 minutes	59°F (15°C) 60 minutes	77°F (25°C) 45 minutes	104°F (40°C) 30 minutes
<b>Brush</b>	Recommended	Use for application of resin saturant and smoothing liquid		
<b>Roller</b>	Recommended	Use for application of resin saturant and smoothing liquid		
<b>Trowel</b>	Recommended	Use for application of basecoat and topcoat		
<b>Thinner</b>	DO NOT THIN			
<b>Cleaner</b>	Ceilcote T-410 Solvent (or MEK)			
<b>Work Stoppages</b>	Once units of paint have been mixed they should not be resealed and it is advised that after prolonged stoppages work recommences with freshly mixed units.			
<b>Clean Up</b>	Clean all equipment immediately after use with T-410 Solvent.  All surplus materials and empty containers should be disposed of in accordance with appropriate regional regulations/legislation.			

## Epoxy

### PRODUCT CHARACTERISTICS

The detailed Application Guidelines for the relevant Ceilcote system should always be consulted prior to use.

The Ceilcote 505 Coroline application shall be conducted by the Applicator Company using employees trained in the appropriate application procedures. It is strongly advised that both application and application supervision is only carried out by professional personnel who have been trained in the correct use of the products.

The exact specification with regards to dry film thickness and number of coats will be provided by International Protective Coatings prior to application start up.

Surface temperature must always be a minimum of 5°F (3°C) above dew point. Ensure adequate ventilation is provided throughout application and curing. Dehumidification (DH), air conditioning and/or heating equipment may be necessary to control environmental conditions.

For all application steps, the surface temperature, air temperature and material temperature should be between 50°F (10°C) and 110°F (43°C)

Exposure to unacceptably low temperatures and/or high humidities during, or immediately after, application may result in incomplete cure and surface contamination that could jeopardize subsequent intercoat adhesion.

#### Powder Grades

Ceilcote 505 Coroline is available in three grades; 505, 505AR and 505B. The required, type and quantity of powder for each grade per gallon (and litre) of mixed resin is as follows:

<b>505</b>	S-1 Powder	22-26lb/gal (2.6-3.1kg/l). Powder is added to both basecoat and topcoat.
<b>505AR</b>	S-9AR Powder	22-26lb/gal (2.6-3.1kg/l). Powder is added to topcoat only.
<b>505B</b>	B-4 Powder	14-18lb/gal (1.7-2.2kg/l). Powder is added to both basecoat and topcoat.

(AR = Abrasion Resistant Grade, B = Conductive Grade)

For mixing of full units a suitable mechanical mixer is required. For mixing of small quantities the powder should be added to the Base (Part A) component and thoroughly mixed before adding the correct amount of Hardener (Part B).

#### Application

Using a trowel, apply 40-80 mils (1000-2000 microns) of basecoat (target 60 mils, 1500 microns). Press the mat reinforcement into the basecoat, leaving no wrinkles or hollows and apply resin saturant until the reinforcement is translucent. Allow to cure and apply 40-80 mils (1000-2000 microns) of topcoat (target 60 mils, 1500 microns). Allow to cure.

Ceilcote 505 Coroline can be used as part of a **Ceilline system** as follows:

Prime using Ceilcote 680 or 680M primer followed by an elastomeric basecoat layer of Ceilcote Ceilline including the mat reinforcement. Complete with a final layer of Ceilcote 505 Coroline.

Following correct installation, Ceilcote 505 Coroline may be returned to service after the following intervals:

50°F (10°C): 48 hours  
70°F (20°C): 24 hours  
90°F (35°C): 16 hours

Ceilcote 505 Coroline is not intended to be used as a cosmetic finish and color stability will not be achievable.

Note: VOC values are typical and are provided for guidance purpose only. These may be subject to variation depending on factors such as differences in color and normal manufacturing tolerances.

Low molecular weight reactive additives, which will form part of the film during normal ambient cure conditions, will also effect VOC values determined using EPA Method 24.

### SYSTEMS COMPATIBILITY

Ceilcote 505 Coroline should always be applied over correctly prepared primed substrates. Suitable primers are:

Ceilcote 680 Primer  
Ceilcote 680M

Ceilcote 505 Coroline may also form a constituent part of other systems such as

Ceilcote Ceilline grades (Ceilcote 505/505AR/505B Ceilline)

## Epoxy

### ADDITIONAL INFORMATION

Further information regarding industry standards, terms and abbreviations used in this data sheet can be found in the following documents available at [www.international-pc.com](http://www.international-pc.com):

- Definitions & Abbreviations
- Surface Preparation
- Paint Application
- Theoretical & Practical Coverage
- Ceilcote 505 Coroline Application Guidelines

Individual copies of these information sections are available upon request.

### SAFETY PRECAUTIONS

This product is intended for use only by professional applicators in industrial situations.

All work involving the application and use of this product should be performed in compliance with all relevant national Health, Safety and Environmental standards, regulations and legislation.

Proper ventilation must be provided during application and afterwards during curing (refer to product datasheets for typical curing times) to ensure safe limits and prevent fires and explosions. Forced extraction will be required in confined spaces. Ventilation and/or respiratory personal protective equipment (airfed hoods or appropriate cartridge masks) must be provided during application and curing. Take precautions to avoid skin and eye contact (overalls, gloves, goggles, masks, barrier cream, etc).

Before use, obtain, read and then follow the advice given on the Material Safety Data Sheets (Base and Curing Agent if two-pack) and the Health and Safety section of the Coatings Applications Procedures for this product.

In the event that welding or flame cutting is performed on metal coated with this product, dust and fumes will be emitted which will require the use of appropriate personal protective equipment and adequate local exhaust ventilation.

The detailed safety measures are dependent on application methods and the work environment. If you do not fully understand these warnings and instructions or if you cannot strictly comply with them, do not use the product and consult International Protective Coatings.

PACK SIZE	Unit Size	Part A		Part B	
		Vol	Pack	Vol	Pack
	20 liter	17.78 liter	20 liter	2.22 liter	4 liter
	5 US gal	4.44 US gal	5 US gal	0.56 US gal	1 US pint
Consult Ceilcote 505 Coroline Installation Procedures for specific details					
SHIPPING WEIGHT (TYPICAL)	Unit Size	Part A		Part B	
		Vol	Pack	Vol	Pack
	20 liter	21.52 kg		2.61 kg	
	5 US gal	45 lb		5.5 lb	
Powder component is typically supplied in 50lb or 20kg units depending upon supply location. Contact International Protective Coatings for further details.					
STORAGE	Shelf Life	18 months minimum at 77°F (25°C). Consult Ceilcote 505 Coroline Installation Procedures for specific details
