

Overcoating interval with self

#### Alkyd

PRODUCT DESCRIPTION

A quick drying, high gloss alkyd enamel available in a wide range of colors.

**INTENDED USES** Used as a high gloss enamel finish for interior and exterior applications. Suitable for mild industrial and commercial environments. Particularly suited for fabrication facility application.

#### PRACTICAL INFORMATION FOR DEVLAC 1433

Color	Wide range via the Chromascan® system	
Gloss Level	Gloss	
Volume Solids	37%	
Typical Thickness	1.5-2 mils (38-50 microns) dry equivalent to 4.1-5.4 mils (103-135 microns) wet	
Theoretical Coverage	390 sq.ft/US gallon at 1.5 mils d.f.t and stated volume solids 9.70 m²/liter at 38 microns d.f.t and stated volume solids	
Practical Coverage	Allow appropriate loss factors	
Method of Application	Airless Spray, Roller, Brush	
Drying Time		

			e rerecating i	
Temperature	Touch Dry	Hard Dry	Minimum	Maximum
50°F (10°C)	1.5 hours	20 hours	24 hours	Extended <sup>1</sup>
59°F (15°C)	1 hour	16 hours	24 hours	Extended <sup>1</sup>
77°F (25°C)	30 minutes	5 hours	20 hours	Extended <sup>1</sup>
104°F (40°C)	15 minutes	2 hours	6 hours	Extended <sup>1</sup>
<sup>1</sup> See International Protective Coatings Definitions & Abbreviations				

#### REGULATORY DATA Flash Point (Typical) 79°F (26°C)

Product Weight VOC 10.0 lb/gal (1.2 kg/l)

4.49 lb/gal (539 g/lt)

EPA Method 24

See Product Characteristics section for further details

SURFACE PREPARATION

All surfaces to be coated should be clean, dry and free from contamination. Prior to paint application, all surfaces should be assessed and treated in accordance with ISO 8504:2000.

Devlac 1433 should always be applied over a recommended anti-corrosive coating scheme. The primer surface should be dry and free from all contamination, and Devlac 1433 must be applied within the overcoating intervals specified (consult the relevant product data sheet).

Areas of breakdown, damage etc., should be prepared to the specified standard (e.g. SSPC-SP6 or Sa2½ (ISO 8501-1:2007), Abrasive Blasting, or SSPC-SP11, Power Tool Cleaning) and patch primed prior to the application of Devlac 1433.

APPLICATION	Mixing	This material is a one component coating and should always be mixed thoroughly with a power agitator before application.	
	Mix Ratio	Not applicable	
	Airless Spray	Recommended	Tip Range 13-19 thou (0.33-0.48 mm) Total output fluid pressure at spray tip not less than 2005 psi (141 kg/cm²)
	Air Spray (Pressure Pot)	Not suitable	
	Brush	Recommended	Typically 1.0-1.6 mils (25-40 microns) can be achieved
	Roller	Recommended	Typically 1.0-1.6 mils (25-40 microns) can be achieved
	Thinner	T-5 Thinner	Do not thin more than allowed by local environmental legislation
	Cleaner	T-5 Thinner	
	Work Stoppages	flush all equipment with	remain in hoses, gun or spray equipment. Thoroughly T-5 Thinner. Partially filled containers may show a viscosity increase of the material after storage.
	Clean Up	practice to periodically cl	ediately after use with T-5 Thinner. It is good working ean equipment during the course of the working day. ill depend upon amount sprayed, temperature and any delays.
		All surplus material and with appropriate regiona	empty containers should be disposed of in accordance I regulations/legislation.

### Alkyd

PRODUCT CHARACTERISTICS

Level of sheen and surface finish is dependent on application method. Avoid using a mixture of application methods whenever possible.

As with all alkyd systems, Devlac 1433 has limited chemical and solvent resistance and is not suitable for use in immersion situations or in conditions of continuous condensation.

Devlac 1433 is not designed for application over epoxies or polyurethanes, and should not be applied over zinc based primers becasue of dangers of saponification of the alkyd resin and consequent adhesion loss.

For brush and roller application, and in some colors, two coats of Devlac 1433 may be required to give uniform coverage.

If applying Devlac 1433 in enclosed maintenance conditions ensure adequate ventilation.

Surface temperature must always be a minimum of 5°F (3°C) above dew point.

Note: VOC values are typical and are provided for guidance purpose only. These may be subject to variation depending on factors such as differences in color and normal manufacturing tolerances.

Low molecular weight reactive additives, which will form part of the film during normal ambient cure conditions, will also effect VOC values determined using EPA Method 24.

Devlac 1433 is only suitable for application over alkyd or oleoresinous priming systems, e.g.:

Devprime 1401 Devprime 1403 Devprime 1405 Devprime 1407

For other suitable primers consult International Protective Coatings.

Devlac 1433 is only suitable for overcoating with itself, and should not be topcoated with any other product.

ADDITIONAL

Further information regarding industry standards, terms and abbreviations used in this data sheet can be found in the following documents available at www.international-pc.com:

- · Definitions & Abbreviations
- Surface Preparation
- · Paint Application
- Theoretical & Practical Coverage

Individual copies of these information sections are available upon request.

SAFETY PRECAUTIONS

This product is intended for use only by professional applicators in industrial situations in accordance with the advice given on this sheet, the Material Safety Data Sheet and the container(s), and should not be used without reference to the Material Safety Data Sheet (MSDS) which International Protective Coatings has provided to its customers.

All work involving the application and use of this product should be performed in compliance with all relevant national, Health, Safety & Environmental standards and regulations.

In the event welding or flame cutting is performed on metal coated with this product, dust and fumes will be emitted which will require the use of appropriate personal protective equipment and adequate local exhaust ventilation.

If in doubt regarding the suitability of use of this product, consult International Protective Coatings for further advice.
