

# Devlac 1437

## Premium traditional gloss alkyd enamel

Devlac® 1437 premium traditional gloss alkyd enamel applies and performs like the alkyds you remember. This low volatile organic compound (VOC) alkyd enamel is unlike any other because it dries like the alkyds sold before the VOC changes, achieving an initial hardness much quicker than other high solids alkyds. Devlac® 1437 has an extended working time, not like other low VOC alkyds that use special exempt solvents (not counted as VOCs) which can lead to skinning problems and long dry times. Additionally, exempt solvents in low VOC alkyds tend to flash off too quickly and leave an objectionable odor. Devlac® 1437 alkyd enamel utilizes a state-of-the-art alkyd resin formulation that delivers high film build, high solids, low VOC, and a reasonable dry time.

Devlac® 1437 premium traditional gloss alkyd enamel applies, performs and protects like the alkyds you remember.

- Excellent hide via film build
- Good edge build
- Two hour dry to touch
- Low VOC, < 2.8 lb/gal (340 g/L)
- Excellent workability, flow and leveling
- Low odor (no “exempt” solvents)
- High solids means superior coverage rates

**The power to protect™**
